

Abstract of the Disclosure

Reactive polyurethanes containing free isocyanate groups but low levels of monomeric asymmetrical diisocyanate may be obtained by
5 reacting a monomeric asymmetrical diisocyanate such as diphenylmethane-2,4'-diisocyanate (2,4'-MDI) containing less than 5% 4,4'-MDI and 2,2'-MDI, the 2,2'-MDI content being under 0.4%, with a polyhydric alcohol such as a diol with a molecular weight of 60 g/mol to
10 2,000 g/mol. The ratio of isocyanate groups to hydroxyl groups may be a value of 1.05:1 to 2.0:1. The reactive polyurethanes can be used to produce one- and two-component adhesive and sealant products.
